

Simple Guide: Adding ArgyllCMS to Your Computer (Easy Steps)

What This Does

This little program helps your computer find and use the ArgyllCMS printer tools. You only need to do this once.

BEFORE YOU START: Find Your ArgyllCMS Folder

You need to know where ArgyllCMS is installed on your computer.

How to Find It:

1. **Click the Start button** (bottom left corner, looks like a Windows logo)
2. **Click "File Explorer"** (yellow folder icon)
3. **Click "This PC"** on the left side
4. **Look for a folder named "Argyll"** (might be "Argyll_V3.4.0" or "Argyll_V3.5.0")
5. **Double-click it**
6. **Look for a folder named "bin"** inside it
7. **Write down the full path** (example: C:\Argyll_V3.5.0\bin)

If you can't find it: ArgyllCMS might not be installed. You'll need to install it first.

Quick Summary (All Steps Together Below)

1. Save the file to your Desktop
2. Right-click it → Open with Notepad
3. Change the path to your ArgyllCMS folder
4. Save and close Notepad
5. Open PowerShell (Start → type "PowerShell")
6. Type: `cd Desktop`
7. Type: `powershell -ExecutionPolicy Bypass -File add_argyll_path_windows.ps1`
8. Close PowerShell
9. Open PowerShell again
10. Type: `targen --version`

STEP 1: Get the Script File

Option A: Download from Internet

1. **Open your web browser** (Chrome, Edge, or Firefox)
2. **Go to the website** https://github.com/soul-traveller/Argyll_Printer_Profiler
3. **Find the file** called

`add_argyll_path_windows.ps1` (under folder `add_argyll_path_windows`)

4. **Click on it to enter the file**
5. **Click on button with down arrow "download raw file"**
6. **Save it to your Desktop**

Option B: Copy from Your Files (if Argyll_Printer_Profiler downloaded)

1. **Click the Start button**
2. **Click "File Explorer"**
3. **Find the folder** where you have the Argyll_Printer_Profiler files
4. **Look for the folder** called

`add_argyll_path_windows`

5. **Copy the file**

`add_argyll_path_windows.ps1`

6. **Paste it to your Desktop**

STEP 2: Open the File and Change One Line

1. **Go to your Desktop** (you should see the file there)
2. **Right-click on the file**

`add_argyll_path_windows.ps1`

3. **Click "Open with"**
4. **Click "Notepad"** (or "Choose another app" then "Notepad")
5. **You'll see some text** - look for line 64 that says:

```
[string]$ARGYLL_INSTALLATION_PATH = "C:\Argyll_V3.4.0\bin"
```

6. **Change the part in quotes** to match your ArgyllCMS folder
 - If your folder is `C:\Argyll_V3.5.0\bin`, change it to:

```
[string]$ARGYLL_INSTALLATION_PATH = "C:\Argyll_V3.5.0\bin"
```

7. **Click "File"** at the top
8. **Click "Save"**
9. **Close Notepad**

STEP 3: Open PowerShell

PowerShell is a program that runs this script.

1. **Click the Start button** (bottom left)
2. **Type "PowerShell"** in the search box
3. **You'll see "Windows PowerShell"** appear
4. **Click on it** (just click once, don't right-click)
5. **A blue window will open** - this is PowerShell

STEP 4: Go to Your Desktop

1. **In the PowerShell window**, type this exactly:

```
cd Desktop
```

2. **Press the Enter key** on your keyboard

STEP 5: Run the Script

1. **In the PowerShell window**, type this exactly (all one line):

```
powershell -ExecutionPolicy Bypass -File add_argyll_path_windows.ps1
```

2. **Press the Enter key**

STEP 6: See What Happened

You should see one of these messages:

✅ **"Added Argyll to PATH"** - This is GOOD! It worked!

✅ **"Argyll already in PATH"** - This is GOOD! It was already there!

❌ **Any other message** - Something went wrong. Read the message carefully.

STEP 7: Close PowerShell and Open It Again

This is important! The changes only work in NEW windows.

1. **Click the X** in the top right corner to close PowerShell
2. **Click the Start button**
3. **Type "PowerShell"**
4. **Click "Windows PowerShell"** to open it again

STEP 8: Test If It Worked

1. In the NEW PowerShell window, type:

```
targen -?
```

2. Press Enter

If you see version information: 🎉 **SUCCESS!** It worked!
